

XLUGAΛΛH

IT'S TIME FOR LIGHT

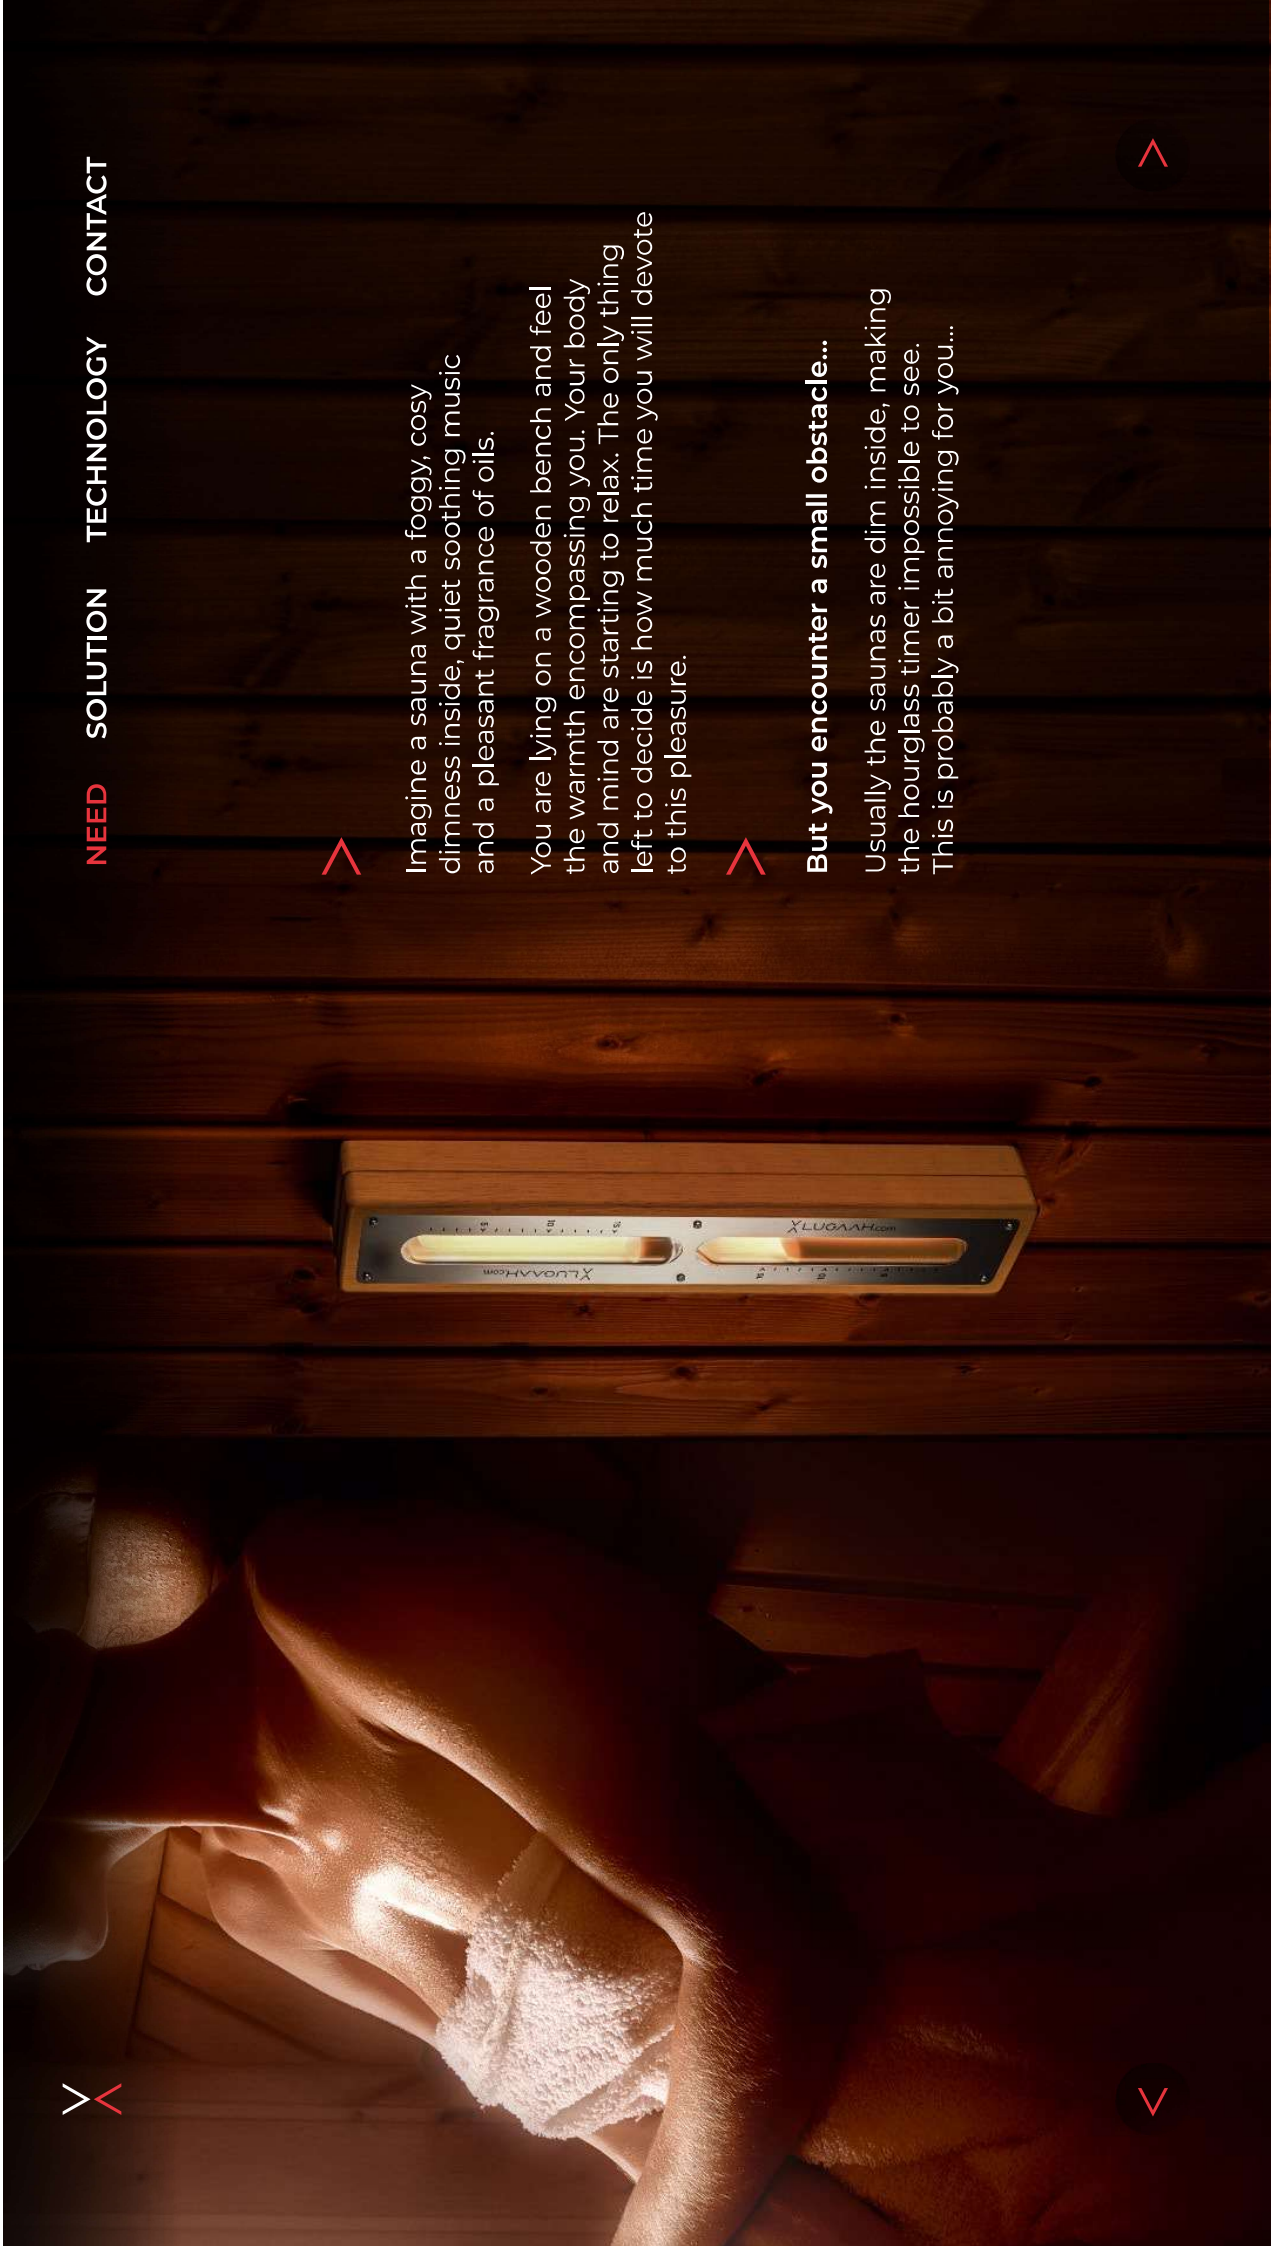

Imagine a sauna with a foggy, cosy dimness inside, quiet soothing music and a pleasant fragrance of oils.

You are lying on a wooden bench and feel the warmth encompassing you. Your body and mind are starting to relax. The only thing left to decide is how much time you will devote to this pleasure.

**But you encounter a small obstacle...**

Usually the saunas are dim inside, making the hourglass timer impossible to see. This is probably a bit annoying for you...

The backlit **LUGAAH** hourglass solves this problem.

The sand timer is perfectly visible, and properly selected intensity of its light doesn't disturb the intimate character of the sauna.

Discreetly keeps track of session time. Cares for perfect pleasure in every minute.

## LUGAAH

The only backlit sand timer in the world designed for a dry sauna.

The hourglass is backlit by an energy-saving LED module, manufactured using OSRAM diodes. LUGAAH hourglass was made by a Polish company that took special care of the precision of each execution stage.

A special technology makes the backlight resistant to high temperature. Moreover, properly applied electronics don't cause flickering.

It's a practical solution that increases the comfort of resting. It's also an innovative solution on a global scale, which is why it has acquired the patent protection.
